ECONOMIC COMMISSION FOR LATIN AMERICA AND THE CARIBBEAN
Subregional Headquarters for the Caribbean

CARIBBEAN DEVELOPMENT AND CO-OPERATION COMMITTEE (CDCC)

SELECTED STATISTICAL INDICATORS
OF CARIBBEAN COUNTRIES

I N T R O D U C T I O N

The need to follow the movements of the major economic variables has required a storage and recall facility for some time recognized by this office. Bibliographic data have been stored and recalled and have been utilized by planners and researchers in an on-line data access mode. Numerical data, on the other hand, have posed problems different from those that affect bibliographic information in that they are subject to revisions and are in fact revised from time to time. This imposes the need for periodic updating and publication of the series for dissemination to the user community.

The present publication presents a number of time series of economic indicators of interest. It does not reflect the totality of holdings in the database, but should be viewed as a first module to a series of publications of statistics of use to the researcher.

The time series presented here are official data obtainable through publications or upon request. They are elements in time series, which increases their reliability over ad hoc estimates made by a visiting expert, with no close reference to the methodology in force at the statistical unit responsible for the time series. Over and above the usefulness of the absolute figures, great benefit is derived from their use to establish

relative movement over time. It is believed that even if the several methodologies used by different countries produce figures that are not directly comparable between them, benefit could nevertheless be derived from evaluating trends over time. One of the major uses of the time series presented is, however, the fact that it provides data not otherwise accessible in any one published document.

There does not exist a universal availability of the time series for all areas of interest. This derives mainly from the disparity in statistical resources available in the several countries. It is hoped that this publication and its successors would indicate data gaps and spur countries on towards the preparation and publication of the series at present lacking, thereby amplifying their statistical data bases.

This publication takes advantage of maturing graphics capabilities to highlight some of the main indicators, and provide an easier comprehension of the figures presented. It is hoped that this aspect of the report will be improved on in subsequent publications.

Clyde C. Applewhite
Director
